Network Monitoring

autoAnalyzer™ Consultancy Kit delivers comprehensive real time network monitoring and troubleshooting. An enterprise network management tool, it is designed to take out the complexity of today's networks and infrastructures.

Enterprise Network Management Today

A recent survey by Network Management Consortium revealed that a logical topology mapping function in management software "improved problem resolution by up to 40%."

Integrated visual mapping capabilities provides for an outstanding enterprise network management tool to be deployed on any infrastructure network.

Helping IT Professionals

autoAnalyzer™ Consultancy Kit is tailored to meet the high demands of service engineers and technicians improving operation efficiency.

It transforms network management from being a complex set of knowledge-dependent, frequently manual tasks into an efficient methodology, maximizing the usage of today's complex infrastructure networks.

Deployed with remote probe manager and probes, it enables remote management, beneficial to organizations in need of managing several remote locations.

The Remote Access Solution provides a secure link with minimal bandwidth overheads, together with a centralized Alarm and Event Reporting system.

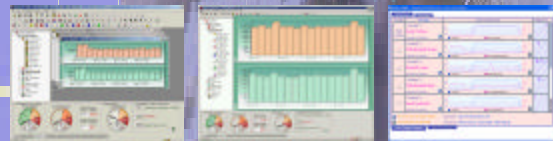

autoAnalyzer™ Consultancy Kit provides both passive statistical and protocol analysis of monitored frames and active analysis using information obtained from SNMP browsing.

It also acts as an SNMP agent to enhance any existing SNMP Management system.

autoAnalyzer Consultancy Kit is created with the trademarks of the Codima Toolbox, easy-to-use, cost efficient and highly visual.

autoAnalyzer™ Consultancy Kit can be deployed as stand alone or with add on tools autoVoIP™, autoVoIP™ Consultancy Kit and autoAsset™.

About autoAnalyzer™ Consultancy Kit

Key Features

- Comprehensive networking, monitoring, and troubleshooting tool with mapping
- Local passive monitoring
- Local active SNMP based management
- Remote Management of probes distributed in remote segments
- The Remote Access Solution allows viewing of remote probes. It provides a secure link with minimal Bandwidth overheads, together with a centralized Alarm and Event Reporting system.
- Reporting on network trends
- Troubleshooting using Expert System

Key Benefits

- Enhanced reporting capability on service levels
- Lower cost of operations
- Lower investment costs
- More efficient use of skilled staff

Key Functions

- Real-time MAP
- Extensive historical analysis
- Extensive real-time traffic analysis
- Alarms & events

Requirements

- Windows XP or 2003 Server with 2GHz CPU (minimum)
- 516Mb RAM (minimum)
- Monitor resolution of 1024 x 768 (minimum)

About add on tools

autoVoIP™

- Adds monitoring and troubleshooting for VoIP networks with easy to use One-Click Management™

autoVoIP™ Consultancy Kit

- Adds Monitoring, Displaying and Analyzing VoIP networks for up to 500 phones with Frame Flow analyzer and RTP analyzer and is available for laptop PC

autoAsset™

- Add Discovery and Reporting on software and devices installed in any Infrastructure Network
